## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 112***

Claim 10 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

As per claim 10 line 10 on page 5 applicant recites “...accelerator is coupled to the CPU...”. The recitation made in the specification on page 7 and line 18 states “...font generator 6 is realized by the hardware accelerator ...”. The limitation made of the record “coupling” and “hardware accelerator” in claim 10 is not described in the specification in such a way as to enable one of ordinary skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 2676

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1,3, and 5- 12 are rejected under 35 U.S.C. 102(e) as being anticipated by Betrisey (US 2001/0048764), hereinafter, Betrisey.

As per claims 1, 3, 5, and 6 Betrisey teaches a stipple buffer for holding gradation data (color samples) of an anti-alias font transferred from a CPU to the stipple buffer see for example column 11 paragraph [146] and figure 19; and foreground color registers (first , second and third as 1932 r, g, b) for setting a font display color see for example column 11 paragraph [146] and figure 19; and background color registers (1934 r, g, b) for setting a background color see for example column 11 paragraph [146] and figure 19; and a blender for blending a font display color of said foreground color register and the background color of said background color register in accordance with the blend coefficient (blend coefficient values 1930) which is the gradation data held in a stipple buffer see for example column 11 paragraph [146], column 11 paragraph [143] and figures 19- 20.

Art Unit: 2676

As per claims 7, and 8 Betrisey teaches the blender loads the blend coefficient from the stipple buffer see for example column 11 paragraph [0146].

As per claims 9, 11, and 12 Betrisey teaches the anti- alias generator is a hardware accelerator (processors) see for example column 9 paragraph [0129] and figure 29.

As per claim 10 Betrisey teaches the hardware accelerator is coupled to the CUP to receive the gradation data see for example column 9 paragraph [0129] and figure 29.

#### ***Allowable Subject Matter***

Claims 2 and 4 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

#### ***Response to Arguments***

Applicant's arguments with respect to claims 1, 3, and 5 have been considered but are moot in view of the new ground(s) of rejection.

***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure; 5,555,360, 6,307,566, 5,940,080, 6,342,896, 5,831,627, 6,393,145, 6,624,828, 6,226,017;

US patent 6129062 teaches calculating fog coefficient (blending coefficient values), blending, a frame buffer and coefficient register and texture pattern computing section.

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
